

53% of small to medium size business have no methods in place for environmental and energy efficiency management systems.

The government now requires you to have a strategy in place.

It's hard enough to manage the behaviour of your business and deal with rising operational costs, all while trying to meet complex government energy regulations such environmental management ISO 14001 and energy management ISO 50001.

The rapidly changing needs of the energy sector and changes to the laws now involves high-level reporting and control. If not, you could be breaching environmental laws and legal risk to you or your business.

Businesses are adopting environmental action plans in response to legislation, however there are commercial and financial benefits for those businesses that tackle the agenda. These benefits can be realised through:

- Reduced operating costs**
- Positive reputational benefits**
- Access to new markets**
- Competitive differentiator**

ESL Environmental & Energy Management takes the pressures of complicated and unwieldy reporting away, allowing you to concentrate on running your business. We sit alongside your business and work to keep in check, environmentally and for energy efficiency perspective.

What We Offer

- Initial Energy Audit & Report
- Environmental & Energy Management Systems
- Assistance with policy
- Annual Review Document
- Policy & Procedure Review
- Your Consultant
- LED Lighting
- Energy Monitoring
- PV & Battery Storage

Initial Energy Audit and Report

We provide a full report and understanding of the current performance of your energy use and impact on the environment. Defining recommendations for energy cost savings.

Energy & Environmental Management Systems

Strategic planning for a comprehensive energy management plan, includes defining essential components to either creating or enhancing your energy management program.

Assistance with policy

We are continually reviewing and understanding any legislation changes to energy management and environmental impact. These changes will be reviewed within the context of your business and changes that may need to be applied.

Annual Review Document

An Annual Review setting out the work we've done and how we've implemented changes to your energy and environmental strategies.

Your Consultant

A fully compliant consultant will be assigned your business. Building a relationship with you and your business. The consultant will be your point of contact through the relationship.

LED Lighting

ESL can provide a LED lighting survey that will assist your business in deciding on the most energy efficient and cost effective lighting solutions for your business.

Energy Monitoring

ESL can provide site energy monitoring services for your business. Monitoring your energy usage can help in deciding how to control and efficiently use the available energy in your facility.

PV & Battery Storage

Our aim will be to reduce the payback period of any new or additional measures by maximising usage of any low cost energy and or free energy.
